Batch: 2024–2028 — Expected Graduation: June 2028

EDUCATION

Gokaraju Rangaraju Institute of Engineering & Technology <i>B.Tech in Computer Science and Engineering (Lateral Entry)</i>	2025 – 2028 CGPA: 8.45/10 — Hyderabad, India
Government Polytechnic, Nalgonda <i>Diploma in Computer Science and Engineering</i>	2022 – 2025 CGPA: 9.52/10 — Nalgonda, India

EXPERIENCE

Lead AI Developer (Internship) <i>Sociovia AI (Adtomite Solutions Pvt. Ltd.)</i>	Aug 2025 – Present <i>Remote</i>
– Joined as the first technical intern and led end-to-end engineering of Sociovia’s AI-powered Growth Operating System, transforming product concepts into a production-ready SaaS platform. – Architected an Agentic AI platform across 6+ business modules, integrating CRM, Meta Ads, WhatsApp Automation, analytics, workflow orchestration, and conversational AI into a unified business operating system. – Built AI-driven campaign generation pipelines launching complete Meta advertising campaigns in under 30 seconds, auto-generating audiences, creatives, landing pages, and marketing copy from natural language prompts. – Developed an interactive drag-and-drop workflow builder supporting AI agents, conditional logic, human approvals, API integrations, and autonomous business process automation. – Engineered autonomous multi-agent AI workflows using Gemini, OpenAI, Retrieval-Augmented Generation (RAG), long-term memory, planning, and tool execution for intelligent task automation. – Designed scalable cloud-native backend architecture using FastAPI, Flask, PostgreSQL, Redis, Docker, Firebase, Google Cloud Run, and Qdrant while integrating 10+ production APIs to power a platform serving 500+ users. – Built and maintained RESTful APIs and asynchronous background workers using FastAPI and Redis, improving system throughput and reliability across the platform.	

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, SQL, C, C++, HTML5, CSS3
Core CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, System Design
Frontend: React, Vite, Tailwind CSS, Responsive UI, Component-Based Architecture
Backend: FastAPI, Flask, Node.js, Express.js, REST APIs, WebSockets, Background Workers
AI & Machine Learning: Generative AI, Agentic AI, Multi-Agent Systems, LLM Applications, Retrieval-Augmented Generation (RAG), Prompt Engineering, Vector Search, Semantic Search, AI Automation, Gemini, OpenAI
Cloud & DevOps: Google Cloud Platform (Cloud Run, Cloud Scheduler, Secret Manager), Docker, Git, GitHub, Firebase, Render, Vercel, Netlify
Databases & Storage: PostgreSQL, Redis, Firebase Firestore, MongoDB, Qdrant Vector Database
API Integrations: Meta Graph API, Facebook Marketing API, Instagram Graph API, WhatsApp Business API, Google Gemini API, OpenAI API, Google Sheets API, SMTP Services
Core Concepts: Distributed Systems, Event-Driven Architecture, Workflow Automation, CRM Systems, Microservices, SaaS Architecture, Authentication, Web Scraping

PROJECTS

Artificial Societies – Multi-Agent Intelligence Simulator | *Python, PyTorch, FastAPI* | [GitHub](#)

- Built a multi-agent AI simulation platform where autonomous agents collaborate, negotiate, compete, and evolve within dynamically generated virtual societies.
- Implemented reasoning, planning, memory, reinforcement learning, behavioral modeling, and distributed execution pipelines to simulate emergent collective intelligence.

College AI Assistant & Automation Platform | *Python, FastAPI, React, Qdrant, Gemini* | [Live Demo](#)

- Built AI-powered assistants for **4+ educational institutions** using RAG, semantic search, vector databases, and intelligent web crawling to create institution-specific knowledge bases.
- Automated retrieval of attendance, results, timetables, regulations, placements, admissions, faculty information, and student services through web and WhatsApp interfaces.

Smart HoloVision+ | *Python, Android, OpenCV, Diffusion Models, AR* | [Research Paper](#)

- Developed an AI-powered holographic visualization system that transforms natural language prompts into interactive 3D holographic models using diffusion models, computer vision, and augmented reality.
- Designed the complete AI pipeline for image generation, depth estimation, 3D reconstruction, holographic rendering, and Android integration, resulting in a published research paper.

PUBLICATIONS & ACHIEVEMENTS

- Published research paper titled ”**Android Powered Smart HoloVision: AI-Based 2D to 3D Holographic Visualization System**” in IJARST. [Paper](#)
- **2× District-Level Winner** at the **Srujana Tech Fest** for software innovation and project development.
- Secured **7th rank (2023)** and **5th rank (2024)** at the State Level in Srujana Tech Fest project competitions.
- Solved **300+ Data Structures & Algorithms problems** across multiple competitive programming platforms.

LEADERSHIP

- Served as the first technical intern, driving engineering decisions and feature delivery across the company’s AI platform.
- Partnered directly with founders to define product roadmap, technical architecture, and release planning for new AI capabilities.
- Mentored incoming AI interns through code reviews, onboarding, and implementation guidance for backend and AI modules.
- Established engineering practices, reusable backend components, and AI workflows that accelerated feature development across teams.
